Historical records, Cases I-VII -- no model recomputation
(a) Half-coverage penetration
I: temperature
II: inlet pressure
III: molar mass
IV: aspect ratio
V: exposure duration
VI: sticking coefficient
VII: adsorption capacity / site area
Model A: $x_{0.5}/H$
Model B: $x_{0.5}/H$
(b) Slope at half coverage
Model A: $|d\theta/d(x/H)|$
Model B: $|d\theta/d(x/H)|$
(c) Adsorption-front broadness
Model A: $(x_{0.1}-x_{0.9})/H$
Model B: $(x_{0.1}-x_{0.9})/H$
